

Bank-grade AI System Registry

A governed inventory for AI systems across business ownership, lifecycle status, risk tiering, control health, evidence, and review cadence.

[Inventory](#)[Discovery](#)[Gaps](#)[Onboarding](#)[Status](#)[System Workspaces](#)[Owners](#)[Lifecycle](#)

AI systems

Mapped controls

Control attention

Evidence reviewed

What is an AI System?

An AI System is more than a model. In a bank-grade registry it includes models, agents, prompts, tools, APIs, data sources, workflows, vendors, controls, evidence, and human oversight.

Why Risk Tiering Matters

Risk tiers help governance teams decide review depth, evidence expectations, control testing frequency, and executive escalation before a system reaches production.

Why Ownership Matters

Clear business, technology, risk, and executive owners prevent AI systems from becoming orphaned services with unclear accountability during incidents, audits, or regulatory exams.

Action Required

[Failed Control](#)
[Legacy Branch Assistant: mapped control requires attention](#)

[Lifecycle gate is blocked pending approval, evidence, validation, or retirement action.](#)
